

Project Title	School Management System UI Design
Tools Required	Figma (Preferred), optional: Adobe XD or Sketch
Project Difficulties level	Advanced

Project Description

Objective:

Design a comprehensive and professional UI for a **School Management System** that serves multiple user roles (admin, teacher, student, parent). The UI should support key features such as student profiles, attendance tracking, grade management, class schedules, announcements, and communication tools.

The focus is on creating a clean, functional, and intuitive interface that manages complex data and workflows effectively across devices.

Skills to Practice:

- Designing responsive UIs for web and mobile
- Wireframing multi-role user flows (admin, teacher, student)
- Creating high-fidelity mockups for complex systems
- Designing dashboards and data-rich interfaces
- Using visual hierarchy and clear layout to manage large datasets
- Creating modular components (tables, cards, forms)
- Designing user-friendly navigation and role-based permissions UI

Project Requirements

1. Final UI Design (Web UI, Multiple Screens)

Design the UI (Web preferred - 1440×1024, or Mobile - 375×812) for a School Management System. Suggested screens:

- Dashboard (for admin, teacher, and student separately)
- Student Information/Profile Page

- Attendance Tracker
- Class Schedule / Timetable
- Gradebook / Report Card View
- Notifications & Announcements
- Messaging / Communication Panel
- Optional: Login, Splash Screen, Settings

2. Color Palette

- Primary Color (e.g., navy blue, royal purple for professionalism)
- Accent Color (e.g., teal, amber, or green for highlights)
- Background: Light background with dark text for clarity
- Text Colors: Use high contrast with accent color for important info

3. Typography

- Heading Font (e.g., SF Pro, Poppins, Montserrat)
- Body Font (e.g., Roboto, Inter)
- Use font size hierarchy to separate headers, labels, and data

4. Basic UI Elements

- Tabbed navigation for quick access (e.g., Dashboard, Students, Reports)
- Sidebar menu for desktop layouts
- Tables with filters/sort (for students, grades, etc.)
- Cards for quick overviews (e.g., attendance %, GPA, upcoming events)
- Buttons, dropdowns, inputs with clear states (hover, disabled, etc.)

Project Guidelines:

- Prioritize usability and data clarity
- Maintain consistency in components (buttons, modals, cards)
- Use spacing and layout grids for organized UI
- Use real-world content and scenarios (e.g., classes, assignments, students)
- Display charts/graphs for analytics (attendance trends, academic performance)
- Design for both light and dark mode (optional)
- Responsive for at least 2-3 screen.

Grading Criteria

-
- **Advanced Layout:** Are the screens optimized for complex data interaction?
 - **Typography:** Are fonts readable across devices and content-heavy screens?
 - **Color Usage:** Are colors used consistently to support information hierarchy?
 - **Visual Hierarchy:** Is information easy to scan and digest across roles?
 - **UI Consistency:** Are reusable elements styled uniformly across the app?
 - **Multi-role Experience:** Is each role (admin/teacher/student) clearly represented in the UI?
 - **Advanced Features:** Are features like reporting, filtering, messaging, and scheduling well-integrated?

Submission Format:

- Share Figma file link (view-only)
- Other relevant links
- Short video explaining the project
- Optional: Include a mini style guide (typography + color palette)

Additional Tips:

- Add tooltips or onboarding for dashboard modules
- Use tabs or accordions to manage dense data sections
- Show dynamic states: “No data”, “Loading”, “Success”, “Error”
- Include messaging or notification components for inter-user communication
- Use **Auto Layout** in Figma to ensure responsiveness and consistency in components
- Optional: Design a calendar view for events, parent meetings, and classes

Good luck with your project! Happy Designing!
